

> D-CHGN

The Pilatus PC-24 is convincing in its straightforwardness and uniqueness. As a business jet, it combines the characteristics of a turboprop (by versatility), a medium light jet (by cabin size) and a light jet (by performance). Pilatus has therefore introduced a specific business jet category for the PC-24: the Super Versatile Jet (SVJ) category.

The jet is virtually cross-country capable since it can land on non-asphalt surfaces. As a result, D-CHGN offers an outstanding degree of flexibility and new opportunities, as it can also fly to smaller airfields with short runways. This allows you to fly to your desired destination without the hassle of ground transfers and avoid the traffic congestion of large airports.

D-CHGN carries 6 to 8 passengers and has a range of 3,400 km. The aircraft surprises not only with its performance but also with its adaptability. The interior of the jet can be rearranged at any time by simply removing the seats at short notice or by moving the separation to the baggage compartment. In addition, the jet has a cargo door as standard. These features allow D-CHGN to be variably adapted to your needs. Bulky luggage, sports equipment with excess length and much more can be handled and transported in no time at all. Allow yourself to be surprised and get convinced!

CABIN AMENITIES

- ✓ Lavatory (in front with sliding door)
- ✓ Air Show
